

Hello and welcome to Ian's (The Computer GUY) monthly newsletter.

Yes, in this month's news. I'm going to reveal you the secret on how to get virus instantly GUARANTEE!! Last month, I spent several hours in my virus lab install all kinds free programs and download and get all kinds of wired stuff and visited all types of wired sites, so that I have better preparation when fixing viruses for my customer. Yes, my lap machine got infected with tons of viruses!!

Here is a link of my picture trying to figure out virus in my virus lab:

Please don't think I'm crazy! If you can learn how to get virus, you will know how NOT to get virus.

And some amazing shocking results are raveled in this super powerful newsletter.

The viruses are growing by the seconds. I can no longer combat and fight all these new viruses that is coming out. Last month, I encounter one very tough virus I spent total of 7 hours and still could not get rid of it. I used up all my tools and resource but still can NOT get rid of it. I surrender to this particular virus. It's a nasty virus that put XXX icon on the desktop. I end up have to reinstall the Operating System. Even the best fail sometimes. It shows you that prevention is 1000 times more important anti-virus.

Shocking revelation after my virus lab test:

1. Kazaa P2P file sharing itself is already a virus.
2. Messenger Plus bundle a virus that open up a big and ugly frame whenever you surf the NET.
3. New.net Internet Hijack ATTACK are hiding in following free software:

Go!Zilla
BearShare
Mp3.com
iMesh
Babylon
Webshots
gDivx
BikiniDesk
RadLight / Subtitle Studio
RealNetworks (RealOne Player)
UK Software
Cydoor (LingoWare)
Grokster
KaZaA
Mindset Interactive (NetPalNow)

Conclusion:

Do not install any free software from the Internet because there is a possibility of virus hiding or bundle in the free software. Like I always preach, No Porn, No Gambling and No Games! AND no P2P file sharing!! And watch out for attachments! Those stuff are bad for your mind and very bad for your computer.

Really useful Quick Fix Tips:

Whenever your computer, Internet breaks down, don't panic. Follow this 17 point dead-easy check list!! (Copy and paste following and print it out and put next to your PC.)

1. Restart your computer!!
2. Call your ISP make sure they are up! (Shaw: 604-629-3000 Telus:1-877.310.8324)
3. Shut down your computer
4. Shut down all power
5. Deep breathing with eye close, tongue relaxed for 60 seconds
6. Unplug and plug the power for Router, Modem, Printer..etc.
7. Unplug and plug all cables
8. Take a 15 minutes walking break
9. Check for all lights are on
10. Unplug all USB device except mouse and keyboard
11. Check your PC for burning smell
12. Touch your PC, Modem, Router for very hot temperature
13. See if you can hear any strange noise from PC
14. Take 30 minutes coffee break
15. Wiggle particular cables
16. Coffee break for 2 hour
17. Repeat step 1 to 16

If all easy steps are taken and you are still experience trouble, you may wish to call Ian for professional onsite computer repair.

If you run a business and it's emergency, you should stop at step 7 and call Ian for help right away!!

That's all the good stuff for this month.
